OUR GOAL

Here at The Hose Company, our company goals are to always put our customers' needs first and to help them understand every aspect of what we do. We want our customers' time spent interacting with our team and their purchasing experience to be as valuable, pleasurable and memorable as possible. That's the bottom line.

After your first experience interacting with The Hose Company, we don't want you to question who to contact the next time you're in need of hydraulic hoses, fittings, adapters or many of the other supplies we keep in stock, relative to what we routinely sell. At the end of each day, the interactions we have with our customers' and the feedback they provide helps us perform to a higher standard. From there, we use that exact feedback to develop a more efficient, smooth and guest-centric customer experience.

ADDITIONAL CAPABILITIES

Custom Assemblies

The Hose Company offers full customization and fabrication capabilities for your fluid power and conveyance needs.

Our proprietary brand of hydraulic hose, Hydrauliflex™, can be fitted with couplings to meet your desired specifications. We also offer an assortment of adapters to complete your hydraulic hose assembly.

These hoses and fittings are constructed in-house and are guaranteed to meet your specifications. This can be completed after determining the size of hose you need, as well as the end fittings.

For extra security, it's a great idea to protect your hose assembly with our poly wrap protective coil, bend restrictors, fire sleeve or non-abrasion sleeve.

Ultra Cleaning

We offer hose contamination control technologies for industries that require contamination-free hoses and tubes in order to prevent costly equipment downtime or failure. This is the best way to clean new hydraulic lines by shooting a projectile through the hose or tube assembly with a pneumatic launcher. Projectiles strip out the internal contamination, removing dirt, gunk and oil. Your new hose can be squeaky clean! Now your clean oil will stay clean as it reaches those expensive components, preventing failure and system downtime.
